2 Figures

The figure environment takes care of the numbering and positioning of the image within the document. In order to include a figure, you must use the `\includegraphics` command.

2.1 Example

Images usually will be centered and optionally resized to a percentage of the column width.

This is an example of figure, figure 1 is a dummy figure.

3 Tables

For the creation of tables it is recommended to use the package `ltablex`, it modifies the `tabularx` environment to combine the features of the `tabularx` package (auto-sized columns in a fixed width table) with those of the `longtable` package (multi-page tables)

3.1 Example

This is an example of table, table 2 is a dummy table.

label 2	label 2	label 3
item 1	item 2	item 3
item 1	item 2	item 3

4 Code snippets

Minted is a package that facilitates expressive syntax highlighting in \LaTeX using the powerful Pygments library. The package also provides options to customize the highlighted source code output using `fancyvrb`.

4.1 Example

This is an example of code snippet, code 1 is a dummy code.

```
int main()  
{  
    printf("Hello, World!");  
    return 0;  
}
```
